Cooperations-Partner of Islamic Centre Hamburg (Imam Ali Mosque), Islamisches Bildungs- und Kulturzentrum Österreich (Austria), Enzyklopädie des Islam ([eslam.de](http://eslam.de)), Gütesiegel Halal (Germany), Islamic Republic of Iran, Halal Development Council, Halal Research Council, Mufties Council of Russia, Halal Transaction of Omaha

## Justification

*The mentioned products do not contain any additives, which could be qualified as impure [najis] according to Islamic law, are not produced from any impurity [najasat] and do not contact any impurity during the production process. This has been evaluated by Muslim experts based on the existing list of additives and yearly plant visits since 2020, last on the 4<sup>th</sup> of December 2023.*

Today's Heimatsmühle is a family business since six generations. The Ladenburger family has lived and worked at the mill since 1808.

The mentioned products are based on herbal material. The raw material is delivered to the production plant in Aalen (Germany) via Trucks from regional supply by cooperating farmers or in smaller units. Grain comes mainly from farmlands in Baden-Württemberg and Bavaria. The cargo discharge takes place inside the own manufactory into own silos.

None of the facilities are used to discharge any other raw material, so that any contact to impurity [najasat] during discharge can be excluded. Furthermore, all facilities are cleaned periodically.

All steps and production stages take place in closed apparatuses and facilities which are exclusively used for the mentioned production, so that any contact to impure agents can be excluded. In no production stage the material gets in any contact with human skin.

All mentioned products are treated inside the manufactory in specific production lines. All processes for the grain treatment are based on mechanical or thermal unit operations with following ingredients:

- Aleuronat Glue
- Ascorbic Acid
- Organic wheat malt flour (Bio-Weizenmalzmehl)

All mentioned ingredients are from pure vegetable or mineral sources and therefore ritual pure [tahir] and permitted for Muslims.

Cooperations-Partner of Islamic Centre Hamburg (Imam Ali Mosque), Islamisches Bildungs- und Kulturzentrum Österreich (Austria), Enzyklopädie des Islam ([eslam.de](http://eslam.de)), Gütesiegel Halal (Germany), Islamic Republic of Iran, Halal Development Council, Halal Research Council, Mufties Council of Russia, Halal Transaction of Omaha

The main processes are commonly drying, screening, aspiration, separation of stone, pulverization and mixing of several fractions. The raw material itself was already pure [tahir] and there is no contact with impurity [najasat] during the production processes or any possibility for cross-contamination with impurity [najasat].

At the end of production, the product is full automatically (in some cases with manual support) filled into synthetic material packages as flexible intermediate bulk container or bigbags with polypropylene or paper with acceptable glue. In some cases, the product is delivered directly into the container and delivered to the contracting partner.

The productions facilities are cleaned usually dry or in some cases with pure water without any additive, and no impurity [najasat] gets in any direct or indirect contact neither with the products, nor with the production facilities. During production stages, where skin contact could be possible with employee plastic hand gloves are obligatory.

In the complete manufacturing site exists a strictly prohibition of alcohol for the employee, which is additionally announce over placards. Any irregularity in this field is punished drastically, which is guaranteed by the plant management.

Furthermore, the company applies a quality management system. Every incoming raw material is registered and can be identified retroactive. The production has implemented and maintains a Quality and Environmental Management System which fulfils the requirements of the standards: International Food Standard (IFS, Version 7 at higher level), Quality Standard (Q&S), European Grain Monitoring (EGM) and further organic Standards.

## Conclusion

*The transparency of all production stages as well as the information of all used material inside the facilities do not let any doubt, that the*

## Milling Products

*produced by Max Ladenburger Söhne Heimatsmühle GmbH & Co KG (in Aalen) have to be classified as "pure" [tahir] and permitted and are therefore "halal" (حلال) for Muslims.*
